

Buildings...

are responsible for 50% of the UK's energy consumption and carbon emissions.

Air conditioning...

is one of the highest energy users in a commercial building.

New legislation...

will save up to £1.15 million tonnes of CO₂ per year.

Know the condition of your air conditioning?

No...?

then you could face a charge for breaking the law...

Call 020 7403 1204...

and we'll tell you what to do next (no charge!)

making buildings work

Argent: accredited air conditioning inspections

Inspections are carried out by trained engineers who will check the efficiency of the unit and advise on appropriate actions if they are not running properly or are not compliant.

Why get your air conditioning inspected...?
... there's a fine if you don't.

Who is responsible...?
... anyone who controls operation of the system.

Which systems apply...?
...any installation with more than one cooling unit has a capacity of above 12kw.

The UK Government has introduced new legislation in response to the Energy Performance of Buildings Directive (EPBD). This legislation requires air conditioning systems larger than 12kw in capacity to be inspected and their efficiency assessed.

All systems that total 12kw and over require an inspection certificate now.

If your unit was first put into service after 1 Jan 2008 then you will need your first air conditioning inspection five years after the installation date. Your inspection documents must be kept and if you have recently taken control of a system and you haven't got an inspection report, you need to get it inspected within three months.

CALL US NOW
If you are in any doubt about the capacity of your air conditioning system, call us on 020 7403 1204.

We will ask for some identification detail, located on the nameplate of the air conditioning unit and confirm to you its capacity.

WHAT HAPPENS NEXT?
To comply with the EPBD, the air conditioning system inspection must be carried out by an accredited inspector. Argent will do that for you and we'll also remind you about subsequent checks.

Did you know?
Large businesses waste at least £1.6bn every year by spending too much on energy.

 Our team help clients make the most of the environments in which they work - reducing energy costs, carbon footprints and plant breakdowns.
